FOREWORD

We are pleased to be able to bring you the results of the 1966 Survey of Wage Rates, Salaries and Hours of Labour in Canadian industry. This report, the 49th in an annual series, presents information on wage rates and salaries for hundreds of occupations throughout Canada. Information is derived from a survey conducted by mail each year at October 1 by the Surveys Division of the Economics and Research Branch of the Canada Department of Labour.

In order to make survey results available to the public as soon as possible, tables for individual industries and communities are first published in loose-leaf form. The complete survey results are later issued in a bound volume.

This report is prepared under the direction of Mr. R. Gaudreau, Chief of the Surveys Division, assisted by Messrs. E. J. Beaulieu, D. F. Bellinger and P. B. Wolfe. Its production is made possible through the participation of thousands of employers. Their co-operation is greatly appreciated and we wish to express our thanks to them.

December, 1967

J. L. Mainwaring, Acting Director

GUIDE TO THE CONTENTS OF THE REPORT

This report presents information on wage rates and salaries by occupation and hours of work in selected industries and communities throughout Canada. The information covers the last normal pay period prior to October 1, 1966.

The subject matter of this report is arranged in four parts, as follows:

PART 1. Technical Notes

The Technical Notes outline the scope of the survey and describe the methods used in compiling the information included in the report. They also explain the nature and content of the tabular material presented, the terms used in the report, the criteria for publication, the general characteristics of the data and the method used in calculating the index numbers of wage rates. A short historical note on the wage survey program of the Canada Department of Labour is also included in this section.

PART 2. Index Numbers of Average Wage Rates

A brief Summary of General Wage Trends included in this part describes the overall changes in wage rate levels in major industry groups during the past year.

The index number series, starting with the 1966 survey data is being revised. The revision includes the use of 1961 as base year and the selection of new occupational and geographical weights.

For the 1966 loose-leaf edition, the index numbers for individual industries will not be published at the same time as the wage rate figures, but will be issued when the revision work in the series has been completed.

PART 3. Industry Wage Rates

In the 1966 survey, a new classification of industries has been introduced. This is the Standard Industrial Classification published in 1960 by the Dominion Bureau of Statistics. Its adoption has necessitated in several cases the use of new occupations. As a result, it is uncertain at the time of publication of this Guide, whether information will be available for all the industries listed in the Preliminary Table of Contents.

Each industry table presents information for a selection of occupations found in the industry concerned. Information, where applicable, is shown separately for time and incentive methods of wage payments. Where the criteria for publication are met, an average rate is included for the industry, in addition to an average and a predominant range of rates for each province and, where applicable, for Montreal and Toronto.

Information is presented on a community basis for certain industries where the focus of interest in wage rate data is primarily oriented towards the community. These industries are as follows: Women's Clothing; Commercial Printing; Printing and Publishing (Daily Newspapers); Construction; Truck Transportation; Bus Transport, Interurban and Rural; Urban Transit Systems; Stevedoring; Radio and Television Broadcasting; Wholesale Trade; Retail Food Stores; Motor Vehicle Repairs; Retail Trade (except Food Stores, Motor Vehicle Dealers and Motor Vehicle Repair shops); Restaurants; Municipal Government Service.

Information on standard hours of work is included for most industries. The average of standard hours per week is shown, where available, for the industry as a whole as well as averages and predominant ranges of standard hours for each of the provinces, and for Montreal and Toronto, where applicable. In most cases, where information is presented on a community basis, the average of standard hours per week is published for each community for which information is available. A separate table shows data on standard hours for individual industries as well as for industry groups.

PART 4. Community Wage and Salary Rates

The final section of the report comprises tables of information on clerical, maintenance and service occupations and labourers by major industry group on a community basis.

In 1966, the selection of communities has been slightly altered and increased from 52 to 58 separate communities.

These tables show average wage and salary rates for 58 office occupations, maintenance trades, service occupations and general labourers, whose duties and responsibilities are similar from one industry to another. Where the criteria for publication are met, an average and a predominant range of rates are shown for a major group which includes all industries surveyed in each community, as well as separate averages for the following industry divisions: Manufacturing; Transportation, Communication and Other Utilities; Trade; Finance, Insurance and Real Estate; Public Administration; Service. Data for the latter five industry divisions are also shown on a combined basis under the heading "Non-Manufacturing", which also includes Logging and Mining. For Montreal, Toronto, Winnipeg and Vancouver, additional tables show a frequency distribution of employees at specific wage or salary intervals for all industries surveyed.

TECHNICAL NOTES

Methods and Scope of Survey

The complete survey covers over 30,000 establishments throughout Canada. This represents substantially complete coverage of all establishments having 20 or more employees in any month of the year in the industries surveyed.

The survey is conducted by means of a reporting form which is mailed to employers. In most cases, the form includes, for each occupation surveyed, a short description of work characteristically performed. The occupational descriptions included in the reporting schedules are designed to help employers identify the specific jobs for which wage information is requested. The descriptions are not to be construed as "standards" for jobs in any particular establishment or industry, as the specific duties and work loads involved in some occupations may vary slightly from plant to plant, as well as from industry to industry.

The most important criteria used in selecting the occupations to be surveyed are the following: numerical importance, prevalence throughout the industry or community, importance in the production process, skill level and capability of clear definition.

The reporting form comprises four parts, as follows:

PART 1 - a general questionnaire designed to obtain information on the following items: industrial activities of the establishment; the number of office and of non-office employees on the payroll; the standard work week; the methods of wage payment; the hiring and basic wage rates paid to labourers or equivalent unskilled employees; the number of professional employees; and the availability of the following: vacation plan for office employees, pension plan and collective agreement for both office and non-office employees.

PART 2 - office occupations.

PART 3 - maintenance trades, service occupations and general labourers.

PART 4 - non-office occupations particularly characteristic of the industry being surveyed. There are some 90 variations of this part of the form, each version applying to a different industry or service.

Employers are asked to submit returns on the basis of "establishments" rather than for "firms" or "companies", as many firms are of a multiple-unit type having one or more branches in different localities. Moreover, because of the variety of products made by some firms, all branches of the firm may not come under the same industrial classification. The industry coverage is described in a footnote to the industry tables.

The wage statistics generally apply to the last normal pay period preceding October 1 in the survey year. The term "normal pay period" means a pay period in which there were no strikes, unusual layoffs or other abnormal conditions. Wage changes occurring on or after October 1 are not included, even where such changes are made retroactive.

Nature and Content of the Tables

The wage information contained in the report is presented in two types of tables. Industry tables show, by occupation, average wage rates for the industry as a whole and averages and predominant ranges of rates by province and for Montreal and Toronto. The community tables present, by occupation, averages and predominant ranges of rates for all industries surveyed in the community, together with separate averages for the following divisions: Manufacturing; Transportation, Communication and Other Utilities; Trade; Finance; Public Administration and Service. The wage information published applies to office, maintenance and service occupations and labourers.

As a rule, in both sets of tables — Industry and Community — returns from all establishments having 20 or more employees have been used to compile the wage information published. However, returns from establishments having 8 or more employees are included for the following industries: Commercial Printing, Printing and Publishing, Machine Shop, Motor Vehicle Repairs, Retail Trade, Finance, Insurance and Real Estate.

For certain industries information is presented for specific cities rather than by province. These industries are: Women's Clothing; Commercial Printing; Printing and Publishing (Daily Newspapers); Construction; Truck Transport; Bus Transport, Interurban and Rural; Urban Transit Systems; Stevedoring; Radio and Television Broadcasting; Wholesale Trade; Retail Trade, Restaurants and Municipal Government Service.

The wage rate figures shown for Railway Transport and Stevedoring are extracted from current collective agreements.

The Industry tables also present information on standard hours of work. Where the criteria for publication are met, an average of standard hours per week is shown for the industry as a whole, in addition to an average and a predominant range for each province, and for Montreal and Toronto separately. In those industries where information is presented on a city basis, an average of standard hours per week is shown for each city for which information is available.

The Community tables present wage and salary information for the major urban areas for selected office occupations, maintenance trades, service occupations and general labourers. Where the criteria for publication are met, an average and a predominant range of rates are shown for the combined group of all industries surveyed in the community, and an average for the following industry divisions: Manufacturing;

Transportation, Communication and Other Utilities; Trade; Finance, Insurance and Real Estate; Public Administration; Service. Data for the five latter divisions are also shown on a combined basis under the heading "Non-Manufacturing", which also includes Logging and Mining. For Montreal, Toronto, Winnipeg and Vancouver, additional tables show the frequency distribution of employees at specific wage or salary intervals for all industries surveyed in the community.

The definition of the areas included in the Community tables is based on the Metropolitan Area or Labour Market concept.

The heading "Public Administration" in the Community tables includes the municipal, provincial and federal levels of government. Each level of government is considered as one establishment in the application of the publication criteria (see "Criteria for Publication" below). Under the heading "Service" are included establishments meeting the minimum size criterion in the following major groups: Recreational Services, Service to Business Management, Personal Services, and Miscellaneous Services. The groups, Education and Related Services and Religious Services are not covered, while in the Health and Welfare Services group only Hospitals are included. It should be noted that Hospitals were not included in the "Service" group before the 1966 survey, although in previous years they were included in the "Non-Manufacturing" and "All Industries" divisions.

Explanation of Terms

Average Wage Rate (Time Work) and Average Straight-Time Earnings (Piece and Incentive Work)

The wage rates of time workers and the straight-time earnings of piece and other incentive workers are compiled separately. In industries where both methods of wage payment are common, separate averages and ranges are provided for time and incentive workers; otherwise, only time rates are shown.

The term "Average Wage Rate" as used in the report means the weighted average of straight-time rates paid on a time basis in an occupation. "Average Straight-Time Earnings" is similarly defined, except that it applies to earnings paid to incentive workers under piece-work or other incentive methods of wage payment. To obtain these averages, the wage rates or earnings in an occupation are multiplied (weighted) by the number of employees receiving each rate, the sum of these products then being divided by the total number of employees reported in the occupation.

Information published in the Community tables is confined to time work.

Predominant Range

In addition to the averages, predominant ranges of rates and earnings are shown for both time and incentive methods of wage payment. The predominant range includes the rates for the middle 80 per cent of the number of employees reported in an occupation. In other words, 10 per cent of the workers receive the highest figure shown in the range or more, and 10 per cent receive the lowest figure in the range or less. No range is shown where the rates for an occupation apply to less than 10 employees.

A predominant range is not published for the industry as a whole, since interest in this type of information appears to have focussed on the provincial figures. The predominant range for an industry cannot be derived from the ranges shown for the provinces, because the coverage for and industry often extends beyond that indicated by the provinces for which data are published.

Standard Hours

Standard hours per week refer to the number of hours per week normally scheduled for the majority of non-office employees in an establishment and during which straight-time or regular wage rates are paid. Averages of standards hours are obtained by multiplying (weighting) the number of standard hours by the number of non-office employees in each establishment, and dividing the sum of the products by the total number of non-office employees. Most industry tables include averages and predominant ranges of standard hours for provinces and for Montreal and Toronto, and an average for the industry as a whole.

Standard weekly hours of work for non-office employees for the individual industries and industry groups covered by the survey are listed in a separate table.

Geographic Classification

In most industry tables, the averages and predominant ranges of wage rates and/or straight-time earnings are published for each province where information collected meets the criteria for publication described below. Separate figures are also shown for the Montreal and Toronto metropolitan areas where possible. The "industry" average for each occupation includes rates from the provinces listed in the tables, in addition to data for other provinces and territories where the criteria for publication are not met.

Criteria for Publication

For an average to be published for an occupation, the rates must apply to at least 5 employees in 3 establishments, or to 10 or more employees in 2 establishments, provided that more than 20 per cent of the total number of employees is reported by one of the two establishments. Only the latter rule is used to determine the publication of predominant ranges of wage rates.

These criteria are applied for two reasons: to avoid revealing the rates paid by any one establishment and to ensure a reasonable degree of representativeness of the data.

These publication criteria are not applied in the following industries: Printing and Publishing (Daily Newspapers); Construction; Railway Transport; Urban Transit Systems; Stevedoring; Municipal Government Service.

Characteristics of Statistics of Wage Rates and Straight-Time Earnings

Some important features of the wage data are described below:

- (1) The most common type of time rate for non-office employees is an hourly rate under which the employee is paid a fixed amount for each hour worked. Consequently, in cases where hourly rates are requested on the survey forms, and daily, weekly or monthly rates are reported, the reported rates are converted to an hourly basis. However, daily, weekly or monthly rates are sometimes shown for occupations in industries in which such methods of wage payment are common. When monthly rates are converted to weekly rates, or vice versa, a conversion factor of 4% weeks per month is used. When weekly rates are converted to hourly rates, the weekly rate (exclusive of overtime or other premiums) is divided by the standard weekly hours of work as reported. All rates include cost-of-living bonus payments where applicable.
- (2) The most common types of straight-time earnings are those based on piece-work or various production or incentive bonus systems; other types are based on commission or mileage.
- (3) Overtime premium rates are not included in the wage figures published. Also excluded are shift differentials, non-production bonuses (except cost-of-living bonus payments), shares in company profits and the monetary value of fringe benefits such as group insurance, sick benefits, uniforms, etc. The rates are derived from the employee's wage before deductions are made for taxes, unemployment insurance contributions, pension payments, etc.
- (4) Where board and lodging are customarily provided without charge, this is indicated. In the case of hotels and restaurants, the monetary value of meals and rooms, where provided free of charge, is included in the rates shown.
- (5) The rates published in this report are those applying to fully qualified employees in the occupations surveyed. Unless otherwise stated, the rates apply to male employees only. Rates for beginners, learners, apprentices, improvers, foremen and lead hands are not included, although rates for helpers, which are sometimes requested on the reporting forms, are shown separately.
- (6) Rates for part-time employees working less than half the standard hours are not included.

Method of Calculation of Index Numbers

Since index numbers of average wage rates were first published in 1921, improvements have been made in the quality of the primary data, in the extent of industrial and occupational coverage, and in certain of the methods of calculating index numbers. While improvements in the quality and scope of wage rate statistics have been made regularly, major revisions in the index numbers have been introduced infrequently and only when there was a change in the base period.

In 1966, in order to make the index numbers of average wage rates comparable with indexes being produced in other government agencies, it was decided to change the base year from 1949 to 1961. Along with this change, the weights used in calculating the index numbers have been revised to reflect more recent conditions than the weights used previously.

The adoption of the 1960 Standard Industrial Classification caused changes in the occupational make-up of some industries and led to the appearance of entirely new industries for which a series of wage rate data permitting the calculation of index numbers will not be available for some years. Index numbers will be prepared for the years 1961-65 that incorporate all these changes for all industries for which sufficient data are available. This will enable users to compare the effects of the changes on these industries for which 1961-65 indexes on the old basis have already been published using 1949 as base year.

The industry index numbers are derived from occupational indexes of wage rates. These are calculated on the base of average wage rates in 1961 as 100, using a system of "aggregates of weighted averages". The rates for time work and incentive earnings are combined in the calculation of the occupational index numbers.

The index numbers are based on the rates paid to certain non-office occupations in which, during the period 1963-65, a significant proportion (2 per cent or more) of all non-office employees were reported. The movement of rates for these occupations is considered to reflect changes in rates paid for all non-office occupations in the industry.

Average wage rates are calculated for each of these selected occupations within the industry for each of five regions in Canada — the Atlantic Provinces, Quebec, Ontario, the Prairie Provinces and British Columbia. However, if any region contained less than 2 per cent of the industry's non-office employment, as reported to the survey over the period 1963-65, no average is calculated for that region. For each occupation, the regional average wage rate is multiplied by a percentage (weight) which is the proportion of the industry's total non-office employment found in this region over the period 1963-65. The proportion or weight for a region is held constant from year to year in order to isolate the movement of wage rates for an occupation from the effects of inter-regional employment shifts. The index number for the occupation is obtained by dividing the sum of the products of average rates and region weights by a similar aggregate for the base year, 1961.

These occupational indexes are then multiplied by their appropriate occupational weights, and the aggregate, divided by the sum of the weights is the index number for the industry. Each occupational weight represents the proportion of the number of employees in that occupation to the total number of employees in all the occupations used in the calculation of the index number, as reported over the period 1963-65. These weights are also held constant from year to year.

To obtain an index number for a major group such as Food and Beverage Industries or Textile Industries, industry indexes are weighted on the basis of labour force data from the 1961 Census so as to reflect the relative importance of each industry. Index numbers for industrial divisions such as Mining, Manufacturing, etc., are obtained by weighting the major group indexes using weights based on 1961 labour force data for each major group.

Historical Note

Statistics of wage rates and hours of labour have been collected by the Canada Department of Labour since its formation in 1900 and results were published from time to time in the *Labour Gazette*.

Early Reports

The first separate report on wages was issued in 1921 as a supplement to the Labour Gazette. This was the first in the present series, and it contained statistics for certain trades within various industries in a number of cities. The information was obtained mainly from employers and trade unions, but data from collective agreements, information obtained by departmental representatives in the field and that received from Labour Gazette correspondents were also used in early reports. In subsequent reports, the scope of the statistics has been gradually broadened, additional groups of industries have been added over the years, and the report now contains information for selected occupations in most of the principal industries of Canada.

Reports from 1956 to 1965

Early in 1957, results from the October 1, 1956 survey were first published in loose-leaf form. Through this new service, survey results have been issued at intervals following the October 1 survey date as information becomes available and have been later incorporated in a bound volume.

The number of establishments included in the survey was increased in 1959 from approximately 13,500 to 19,500 establishments. Readers who wish to appraise the effects of this enlargement in the survey coverage are referred to Wage Rates, Salaries and Hours of Labour, Report No. 43, October 1960; in this report, index numbers of wage rates for the 1959 survey are shown on a basis comparable to the previous series prior to the expansion of the survey coverage, and also on a basis which includes all establishments surveyed in 1959.

In 1960 the survey coverage of office occupations, maintenance trades, service occupations and general labourers was extended from Manufacturing to the following industry divisions for the 52 communities for which information was published: Transportation, Communication and Public Utilities; Trade; Finance and Service.

Starting with the 1961 survey, community information was published separately for Government Service. This was made possible by the extension of the survey to the federal and provincial governments in the 52 communities for which separate tables were published.

In 1964, the coverage in occupations included in the Community tables was further extended to include hospitals with a minimum 25-bed capacity. Information obtained from hospitals was included in the divisions "Non-Manufacturing" and "All Industries" for the years 1964 and 1965. Starting also in 1964, information obtained from establishments located in the Yukon and in the Northwest Territories has been included, where applicable, in the calculation of the Industry average wage rates, shown in the Industry tables.

1966 Report

Three major changes have been introduced in the 1966 survey:

- (1) The classification of industries has been changed from the 1948 to the 1960 Standard Industrial Classification of the Dominion Bureau of Statistics. (Complete details on this classification appear in the Standard Industrial Classification Manual, D.B.S. Publication 12-501.)
- (2) The allocation of reporting units or establishments to individual industrial classification has been reviewed.
- (3) A revised basis of geographic classification has been introduced. These three changes have had some effect on the data for certain industries and communities.

The changes in the industrial presentation of the information caused by the introduction in 1966 of the 1960 Standard Industrial Classification are summarized below:

1 - Industries deleted (1966 report)

- Foundation Garments
- Wooden Boxes and Baskets
- Clay Products

2 - New Industries (proposed selection)

- Children's Clothing
- Smelting and Refining
- Boiler and Plate Works
- Structural, Ornamental and Architectural Metal
- Wire and Wire Products
- Air Transport

- Bus Transport, Interurban and Rural
- Radio and Television Broadcasting
- Telephone Systems
- Hospitals

3 — Industries with changed Basis of Classification

FROM (prior to 1966)

- Men's and Boys' Suits and Overcoats - Men's Clothing

- Men's Fine Shirts

- Work Clothing and Sportswear

- Women's and Misses' Coats and Suits

- Dresses

- Wooden Furniture

- Iron Castings

- Machine Tools

- Industrial Machinery

- Primary Iron and Steel

- Sheet Metal Products

- Brass and Copper Products

- Heavy Electrical Machinery and Equipment

 Radio, Television and Other Electronic Equipment

 Radio, Television and Other Electronic Equipment

 Refrigerators, Vacuum Cleaners and Miscellaneous Electrical Products

 Refrigerators, Vacuum Cleaners and Miscellaneous Electrical Products

- Acids, Alkalis and Salts

 Water Transportation, Freight and Passenger

- Water Transportation, Oil Tankers TO (1966)

- Men's Clothing

- Men's Clothing

- Men's Clothing

- Women's Clothing

Women's ClothingHousehold, Office and Other Furniture

- Iron Foundries

 Miscellaneous Machinery and Equipment

 Miscellaneous Machinery and Equipment

- Iron and Steel Mills

 Metal Stamping, Pressing and Coating

- Metal Stamping, Pressing and Coating

 Electrical Industrial Equipment

 Household Radio and Television Receivers

- Communications Equipment

- Small Electrical Appliances

- Major Appliances (electric and non-electric)

- Industrial Chemicals

- Water Transportation

- Water Transportation

As a result of the revised basis of geographic classification, the number of communities for which information is published has been increased from 52 to 58.

A new series of data for the Construction industry is being introduced in the present report. The figures shown are, with the exception of those for the Province of Quebec, rates of pay and hours of work specified in collective agreements in effect at October 1, 1966. The figures for the communities in the Province of Quebec are those established under the Collective Agreement Decrees Act, administered by the Building Trades Parity Committee in the province. The data were made available to the Canada Department of Labour by the various provincial Labour Departments or other provincial government agencies.

AVANT-PROPOS

Nous sommes heureux de pouvoir vous présenter les résultats de l'enquête de 1966 sur les taux de salaire, traitements et heures de travail dans l'industrie au Canada. Le présent rapport, le 49e d'une série annuelle, fournit des renseignements sur les taux de salaire et traitements pour des centaines d'occupations au Canada. Ces renseignements sont tirés de l'enquête que la Division des enquêtes de la Direction de l'économique et des recherches du ministère du travail du Canada effectue le 1er octobre de chaque année, par l'entremise de la poste.

Dans le but de mettre les résultats de l'enquête à la disposition du public aussitôt que possible, les chiffres pour des industries et localités individuelles sont d'abord publiés sous forme de tableaux sur feuilles mobiles. Les résultats complets de l'enquête sont plus tard publiés en un volume broché.

Le présent rapport a été préparé sous la direction de M.R. Gaudreau, assisté par MM. E.J. Beaulieu, D.F. Bellinger et P.B. Wolfe. Sa publication a été rendue possible grâce à la participation de milliers d'employeurs. Nous apprécions hautement leur collaboration à cette entreprise et nous leur en exprimons tous nos remerciements.

décembre, 1967

Le directeur par intérim, J.L. Mainwaring.

GUIDE AU CONTENU DU RAPPORT

Le présent rapport présente des renseignements sur les gages et taux de salaire par occupation et les heures de travail en vigueur dans des industries et localités choisies à travers le Canada. Les données portent sur la dernière période de paie antérieure au ler octobre, 1966.

La matière du présent rapport est disposée en quatre parties, à savoir:

PARTIE 1. Notes techniques

Les notes techniques indiquent le cadre de l'enquête et décrivent les méthodes employées pour recueillir les renseignements fournis dans le rapport. Elles expliquent aussi la nature et la matière des tableaux présentés, les termes employés dans le rapport, les conditions de publication, les caractéristiques générales des données et les méthodes de calcul des indices des taux de salaire. On trouve également dans cette section une brève note historique sur le programme d'enquête sur les salaires du ministère du Travail du Canada.

PARTIE 2. Indices de taux de salaire moyens

Un exposé sommaire des tendances générales des salaires, contenu dans cette partie, indique brièvement les changements généraux survenus au cours de l'année dans les niveaux des taux de salaire, pour les principaux groupes d'industries.

Les nombre-indices, à partir de l'enquête de 1966, sont revisés. Cette revision comprend l'adoption de 1961 comme année de base et la sélection de nouveaux poids pour les occupations et régions servant à la construction des nombres-indices.

Pour le service sous forme de feuilles mobiles pour 1966, les nombres-indices pour chaque industrie ne seront pas publiés en même temps que les autres données sur les taux de salaire mais seulement lorsque le travail de révision aura été complété.

PARTIE 3. Taux de salaire par industrie

A l'occasion de l'enquête de 1966, une nouvelle classification des industries a été utilisée. Il s'agit de la Classification type des industries, publiée en 1960 par le bureau fédéral de la Statistique. Son adoption a nécessité dans maints cas l'utilisation de nouvelles occupations. Il en résulte qu'au moment d'émettre ce guide, il est incertain si des données seront disponibles pour toutes les industries énumérées dans la Table Préliminaire des Matières.

Chacun des tableaux d'industrie donne des renseignements pour un certain nombre d'occupations-types de l'industrie concernée. Les renseignements, quand ils sont disponibles, sont donnés séparément pour les méthodes de paiement de salaire au temps, et de rémunération au rendement. Le taux moyen dans l'industrie est inclus, en plus de la moyenne et de la marge prédominante de taux pour chaque province et, le cas échéant, pour Montréal et Toronto.

Les renseignements sont fournis par ville dans le cas de certaines industries où l'intérêt qu'on porte aux données sur les taux de salaire est concentré surtout sur la localite. Ces industries sont les suivantes: industrie des vêtements de femmes, imprimerie commerciale, imprimerie et édition (journaux quotidiens), construction, transports par camion, transports interurbains et ruraux par autobus, transports urbains, débardage, radiodiffusion et télévision, commerce de gros, commerce de détail, restaurants, services municipaux.

Des renseignements sur les heures normales de travail sont inclus pour la plupart des industries. La moyenne des heures hebdomadaires normales est indiquée, le cas échéant, pour l'industrie dans son ensemble ainsi que la moyenne et la marge prédominante des heures normales par province et pour Montréal et Toronto. Quand les renseignements sont présentés sur une base de localité, la moyenne des heures hebdomadaires normales est publiée pour chaque localité pour laquelle des renseignements sont disponibles. Les heures normales par industrie et groupe d'industries font l'objet d'un tableau spécial.

PARTIE 4. Taux de salaire et traitements par localité

La dernière section du rapport consiste en tableaux de taux de salaire par localité pour les occupations de bureau, d'entretien, de service et de manoeuvres pour les principales branches d'industries.

En 1966, la sélection des localités a été légèrement changée et le nombre augmenté de 52 à 58 localités.

Ces tableaux indiquent la moyenne des taux de salaire et traitements pour 57 emplois de bureau, d'entretien, de service et de manoeuvres dont les fonctions et responsabilités se ressemblent d'une industrie à une autre. Là où les renseignements répondent aux conditions de publication, une moyenne et une marge prédominante de taux sont indiquées pour l'ensemble des industries visés par l'enquête, de même que des moyennes individuelles pour les branches d'industries suivantes: fabrication; transports, entreposage et communications; commerce; finance, assurances et immeuble; administration publique et service. Les renseignements pour les cinq dernières branches d'industries énumérées ci-haut sont également groupés sous le titre "Autre que fabrication", lequel inclut aussi le forestage et les mines. Pour Montréal, Toronto, Winnipeg et Vancouver, des tableaux supplémentaires indiquent la répartition de fréquence des travailleurs par échelon de salaires ou traitements, pour l'ensemble des industries dans la localité.

NOTES TECHNIQUES

Méthode et cadre de l'enquête

L'enquête complète porte sur plus de 30,000 établissements à travers le Canada. Cela représente virtuellement tous les établissements ayant 20 employés ou plus dans un mois donné de l'année dans les industries visées par l'enquête.

L'enquête est conduite par la poste par l'entremise d'un questionnaire adressé aux employeurs. Dans la plupart des cas, le questionnaire inclut pour chaque occupation comprise dans l'enquête, une brève description du travail qui lui est particulier. Ces descriptions d'occupations comprises inscrites au questionnaire ont pour but d'aider les les employeurs à identifier les emplois particuliers pour lesquels des renseignements sur les taux de salaire sont demandés. Ces descriptions ne sont pas posées en "normes" pour les emplois d'une industrie ou d'un établissement en particulier, étant donné que les fonctions et la somme de travail propres à certains emplois peuvent varier légèrement d'un établissement à l'autre et d'une industrie à l'autre.

Les critères les plus importants auxquels on a eu recours dans le choix des occupations sur lesquelles porte l'enquête sont les suivants: importance numérique, prédominance dans l'industrie ou la localité, importance dans le procédé de production, le degré d'habilité exigé, adaptabilité à une définition précise.

Les formules d'enquête comprennent quatre parties, à savoir:

Partie 1 - Un questionnaire général pour obtenir des renseignements sur les acitivités industrielles de l'établissement, le nombre d'employés hors-bureau et de bureau, la semaine normale de travail, les méthodes de paiement de salaire et le taux d'embauchage et le taux de base versés aux manoeuvres ordinaires ou autres employés non qualifiés; le nombre d'employés professionnels et la présence des conditions suivantes: régime de vacances pour employés de bureau, régime de rentes et de convention collective pour les employés de bureau et hors-bureau.

Partie 2 - emplois de bureau

Partie 3 — occupations des métiers de l'entretien, des services et des manoeuvres.

Partie 4 – occupations caractéristiques de l'industrie sur laquelle porte l'enquête. Cette partie de la formule s'applique à quelque 90 industries différentes.

On demande aux employeurs de faire rapport sur le plan "établissement" plutôt que "entreprise ou compagnie", car bon nombre d'entreprises sont du type à unités multiples, ayant une succursale ou plus dans diverses localités. De plus, à cause de la diversité des produits fabriqués par certaines entreprises, toutes les succursales de l'entreprise peuvent ne pas tomber dans la même classification industrielle. Le cadre de chaque industrie est indiqué dans une note explicative au bas de la plupart des tableaux intéressant l'industrie.

La statistique des salaires s'applique généralement à la dernière période normale de paie précédant le ler octobre de l'année de l'enquête. L'expression "période normale de paie" signifie une période exempte de grèves, de mises à pied exceptionnelles ou d'autres conditions anormales. Les changements dans les salaires apportés le ler octobre ou après ne sont pas considérés, même quand leur effet est rétroactif.

Nature et matière des tableaux

Les renseignements sur les salaires contenus dans ce rapport sont présentés dans deux series de tableaux. Les tableaux sur les industries donnent les taux moyens de salaire, par occupation, pour l'industrie dans son ensemble ainsi que les moyennes et les marges prédominantes des taux par province et pour Montréal et Toronto. Les tableaux sur les localités présentent, par occupation, une moyenne et une marge prédominante de taux pour l'ensemble des industries dans la localité, de même que des moyennes distinctes pour les groupes suivants: fabrication; transports, entreposage et communication; commerce; finance; administration publique et service. Les renseignements publiés s'appliquent aux salaires versés au personnel de bureau, de l'entretien et des services et aux manoeuvres.

Règle générale, dans le cas des deux séries de tableaux, Industries et Localités, les rapports provenant de tous les établissements ayant 20 employés ou plus ont été utilisés pour préparer les renseignements publiés. Toutefois, on a inclu les rapports des établissements comptant 8 travailleurs ou plus dans le cas des industries suivantes: imprimerie commerciale, imprimerie et édition, ateliers de mécanique, réparation de véhicules automobiles, commerce de détail et finance, assurances et immeuble.

Les renseignements sont fournis par ville plutôt que par province dans le cas des industries suivantes: vêtements de femmes, imprimerie commerciale, imprimerie et édition (journaux quotidiens), construction, transports par camion, transports interurbains et ruraux par autobus, transports urbains, débardage, radiodiffusion et télévision, commerce de gros, commerce de détail, restaurants et services municipaux.

Les taux de salaire indiqués pour les transports ferroviaires et le débardage sont extraits des conventions collectives de travail en vigueur.

Les tableaux d'industries présentent également des données sur les heures normales de travail. Là où les conditions de publication sont remplies, la moyenne des heures normales de travail par semaine est indiquée pour l'ensemble de l'industrie, en plus d'une moyenne et d'une marge prédominante pour chaque province ainsi que pour Montréal et Toronto respectivement. Dans les industries où les renseignements sont présentés par localité, la moyenne des heures normales de travail par semaine est indiquée pour chaque localité pour laquelle les renseignements sont disponibles.

Les tableaux de localités présentent des renseignements sur les taux de salaire et traitements pour les emplois de bureau, les métiers d'entretien, les occupations de service et des manoeuvres ordinaires. Là où les conditions de publication sont remplies, une moyenne et une marge prédominante des taux s'appliquent à l'ensemble des industries visés par l'enquête dans la localité, ainsi qu'une moyenne pour les branches d'industries suivantes: fabrication; transports, communications et autres services d'utilité publique; commerce; finances. assurances et immeuble; administration publique; service. Les renseignements pour les cinq dernières branches d'industries précédantes sont également combinés sous le titre "industries non-manufacturières", lesquelles comprennent également le forestage et les mines. Dans le cas de Montréal, Toronto, Winnipeg et Vancouver des tableaux additionnels décrivent la répartition de fréquence des employés par intervale de taux de salaire ou traitement pour l'ensemble des industries visés par l'enquête dans la localité.

La définition du territoire auquel s'appliquent les tableaux de localités est basée sur le concept de Région Métropolitaine ou de Marché du Travail.

Le titre "administration publique" dans les tableaux delocalités couvre les administrations locales, provinciales et fédérale. Aux fins d'application des conditions de publication, chaque niveau d'administration est traité comme constituant un établissement (voir "conditions de publication" ci-dessous). Sous le titre "Service" sont groupés les établissements rencontrant le critère du nombre d'employés minimum parmi les groupes d'industries suivants: services récréatifs, services extérieurs des entreprises, services personnels et services divers. Les groupes "enseignements et services connexes" et "organismes religieux" sont exclus, alors que dans le groupe "santé et oeuvres sociales", seuls les hôpitaux sont inclus. L'on prendra note que les hôpitaux n'étaient pas inclus dans le groupe des services avant l'enquête de 1966, bien qu'au cours des années précédentes ils étaient inclus dans les branches "industries non-manufacturières" et "toutes les industries".

Explications des termes

Taux de salaire moyen (travail au temps) et gains moyens normaux (travail à la pièce et au rendement)

Les taux de salaire des travailleurs rémunérés au temps et les gains normaux des travailleurs rémunérés à la pièce ou selon un autre mode de rémunération au rendement sont établis séparément. Dans les industries où les deux modes de rémunération sont courants, les moyennes et les marges sont indiquées séparément pour les travailleurs rémunérés au temps et les travailleurs rémunérés au rendement; autrement, seuls les taux au temps sont indiqués.

L'expression Taux de salaire moyen utilisée dans le présent rapport indique une moyenne pondérée des taux normaux payés au temps dans une occupation donnée. L'expression Gains moyens normaux est définie de la même facon, sauf qu'elle s'applique aux travailleurs rémunérés à la pièce ou selon un autre mode de rémunération au rendement. On obtient ces moyennes en multipliant (pondérant) les taux de salaire ou les gains propres à une occupation par le nombre de travailleurs rémunérés à chacun des taux, puis en divisant le total ainsi obtenu par le nombre de travailleurs dans l'occupation considérée.

Les renseignements publiés dans les tableaux des localités se rapportent uniquement au travail au temps.

Marge prédominante

Outre les moyennes, des marges prédominantes de taux et de gains sont indiquées pour les modes de rémunération au temps et au rendement. La Marge prédominante englobe les taux du 80 p. 100 moyen de tous les travailleurs sur lesquels on fait rapport dans une occupation. En d'autres mots, 10 p. 100 des travailleurs reçoivent le montant le plus élevé indiqué dans la marge ou d'avantage, et 10 p. 100 reçoivent le montant le plus bas indiqué dans la marge ou moins. Aucune marge n'est indiquée la où les taux d'une occupation s'appliquent à moins de 10 travailleurs.

On ne publie pas de marge prédominante pour l'ensemble d'une industrie, car ici l'intérêt semble concentré sur les données provinciales. La marge prédominante pour une industrie ne peut être déterminée d'après les marges provinciales données, vu que souvent l'industrie dépasse le cadre des provinces concernées.

Heures normales par semaine

Par Heures normales par semaine, on entend les heures par semaine normalement assignées à la majorité des employés hors-

bureau d'un établissement et durant lesquelles les taux normaux de salaire sont payés. On obtient la moyenne des heures normales en multipliant le nombre d'heures normales par le nombre de travailleurs hors-bureau de chaque établissement puis en divisant le total ainsi obtenu par le nombre total de travailleurs hors-bureau. La plupart des tableaux d'industrie donnent les moyennes et les marges prédominantes d'heures normales pour les provinces et pour Montréal et Toronto et une moyenne pour l'industrie entière.

Les heures normales de travail par semaine, dans le cas des travailleurs hors-bureau des industries particulières et des groupes d'industries compris dans l'enquête, sont indiquées à un tableau séparé.

Classification géographique

Dans la plupart des tableaux d'industrie, la moyenne et la marge prédominante des taux de salaire et (ou) des gains normaux sont publiées pour chaque province là où les renseignements répondent aux conditions de publication indiquées, ci-dessous. Des chiffres distincts sont également donnés pour les régions métropolitaines de Montréal et de Toronto, là où il est possible de le faire. La moyenne de "l'industrie" pour chaque occupation donnée comprend les taux des provinces énumérées dans les tableaux, en plus des chiffres pour d'autres provinces là où les conditions de publication ne sont pas remplies.

Conditions de publication

Une moyenne n'est publiée que si les taux s'appliquent à au moins 5 travailleurs d'une même occupation dans 3 établissements, ou à 10 travailleurs ou plus dans 2 établissements, à condition qu'un des 2 établissements accuse plus de 20 p.100 du total des travailleurs. Seule cette dernière condition est utilisée pour déterminer la publication des marges prédominantes de taux de salaires.

Ces conditions s'appliquent pour deux raisons: éviter de révéler les taux de salaire versés par un établissement en particulier et faire en sorte que les données soient raisonnablement représentatives.

Ces conditions de publication ne s'appliquent pas dans le cas des industries suivantes: imprimerie et édition (journaux quotidiens); construction; transports ferroviaires; transports urbains; débardage; administration locale.

Caractéristiques de la statistique sur les taux de salaire et les gains normaux

Voici quelques-uns des aspects importants des données sur les salaires:

- (1) Le mode de rémunération au temps le plus répandu est le taux horaire, en vertu duquel le travailleur touche un montant déterminé pour chaque heure fournie. En conséquence, dans le cas où des taux horaires sont demandés sur les formules d'enquête mais des taux journaliers, hebdomadaires ou mensuels sont rapportés, ces taux sont convertis en taux horaires. Toutefois, des taux journaliers, hebdomadaires ou mensuels sont donnés quelquefois pour certaines occupations dans des industries où prédomine ce mode de rémunération. Pour convertir les taux mensuels en taux hebdomadaires, ou vice versa, le facteur de conversion est de 4½ semaines par mois. Pour convertir les taux hebdomadaires en taux horaires, on divise le taux hebdomadaire (exclusion faite de la rémunération du travail supplémentaire et autres primes) par le nombre d'heures normalement fournies par semaine. Tous les taux comprennent les indemnités de vie chère, le cas échéant.
- (2) Les régimes de gains normaux les plus répandus sont les régimes fondés sur le travail à la pièce et les divers régimes de bonis de production; d'autres régimes sont fondés sur la commission et le millage.
- (3) Les taux majorés pour travail supplémentaire ne sont pas inclus dans les chiffres publiés sur les salaires. Sont exclus également les primes de poste, les bonis non rattachés à la production (sauf les indemnités de vie chère), la participation aux bénéfices de l'entreprise, la valeur en espèces de divers avantages complémentaires tels que l'assurance collective, les allocations en cas de maladie, les uniformes, etc. Les taux sont établis d'après le salaire du travailleur avant les déductions pour impôts, primes d'assurance-chômage, pension, etc.
- (4) Quand la pension et le logement sont habituellement fournis gratuitement, le fait est indiqué. Dans le cas des hôtels et des restaurants, la valeur des repas fournis gratuitement, est incluse dans les taux indiqués.
- (5) Les taux publiés sont ceux qui s'appliquent aux employés pleinement qualifiés des occupations considérées. Sauf indication contraire, les taux s'appliquent seulement à la main-d'oeuvre masculine. Là où l'on fait mention de travailleurs et de travailleuses dans une occupation, des taux distincts sont donnés pour chaque sexe. Les taux des débutants, stagiaires, apprentis, contremaîtres et chargés de main-d'oeuvre ne sont pas inclus, mais ceux des aides sont parfois indiqués séparément.

(6) Les taux des travailleurs à temps réduit fournissant moins de la moitié des heures normales ne sont pas inclus.

Méthode de calcul des nombres-indices

Depuis la publication des indices des taux de salaire moyens pour la première fois en 1921, on a amélioré la qualité des données primaires, augmenté le nombre des industries et occupations considérées et perfectionné certaines méthodes de calcul des nombres-indices. L'amélioration et l'expansion constantes de la statistique des taux de salaire n'ont pas toujours été accompagnées de revisions majeures dans les nombres-indices; ces dernières n'ont eu lieu qu'à l'occasion d'un changement dans la période de base.

En 1966, l'année de base a été changée de 1949 à 1961 afin de rendre les nombres-indices de taux moyens de salaire comparables aux indices préparés par d'autres agences gouvernementales. En plus de ces changements, les poids utilisés dans le calcul des nombres-indices ont été revisés dans le but de mieux refléter les conditions récentes.

L'adoption de la classification type des industries de 1960 a altéré la composition occupationnelle de certaines industries et a mené à l'apparition d'industries entièrement nouvelles pour lesquelles les séries de taux de salaire permettant le calcul de nombres-indices ne seront pas disponibles pour quelques années à venir. De nombres-indices seront préparés pour les années 1961-65 incorporant tout ces changements pour toutes les industries pour lesquelles les renseignements suffisants sont disponibles. Cela permettra aux usagers de comparer les effets de ces changements pour les industries pour lesquelles de nombres-indices couvrant la période 1961 à 1965 sur l'ancienne base ont déjà été publiés avec 1949 comme année de base.

Les nombres-indices d'industries sont obtenus à même des indices de taux de salaire par occupation. Ces indices de taux de salaire par occupation sont calculés en assignant la valeur de 100 à la moyenne des taux de salaire en 1961, utilisant à cette fin un système "d'agrégation de moyennes pondérées". Les taux de salaire pour le travail au temps et les gains sous le régime de primes au rendement sont combinés dans le calcul des nombres-indices par occupation.

Les nombres-indices sont basés sur les taux de salaire payés dans certaines occupations hors-bureau pour lesquelles, durant la période 1963-65, une proportion significative (2 pour cent ou plus) de tous les employés hors-bureau furent rapportés. On considère que le mouvement dans les taux de salaire pour ces occupations reflète le changement dans les taux de salaire dans toutes les occupations hors-bureau dans l'industrie.

A l'intérieur de l'industrie, des moyennes de taux de salaire sont calculées pour chacune des occupations choisies pour chacune de cinq régions au Canada - les provinces Atlantiques, Québec, Ontario, les Prairies et la Colombie-Britannique. Toutefois, si une de ces régions représentait moins de 2 pour cent de tout l'emploi hors-bureau de l'industrie tel que rapporté au terme de l'enquête au cours de la période 1963-65, aucune moyenne n'est calculée pour cette région. Pour chaque occupation, le taux de salaire moven régional est multiplié par un pourcentage (poids) représentant une proportion de l'emploi total hors-bureau dans l'industrie dans cette région au cours de la période 1963-65. La proportion ou le poids pour une région demeure constant d'une année à l'autre, dans le but d'isoler le mouvement dans les taux de salaire pour une occupation des effets, provoqués par les changements dans l'emploi d'une région à une autre. Le nombreindice pour une occupation est obtenu en divisant la somme du produit des taux movens de salaire multipliés par les poids régionaux par une valeur correspondante pour l'année de base 1961.

Ces indices d'occupation sont alors multipliés par leurs poids occupationnels appropriés et la somme, divisée par la somme des poids, constitue le nombre-indice pour l'industrie. Chaque poids d'occupation représente la proportion du nombre d'employés dans cette occupation au nombre total d'employés dans toutes les occupations utilisées dans le calcul du nombre-indice tel que rapporte au terme de l'enquête au cours de la période 1963-65. Ces poids demeurent constant d'une année à l'autre.

Pour obtenir le nombre-indice pour un groupe majeur tel que les industries des aliments et boissons ou l'industrie textile, l'on assigne à chaque indice d'industrie particulière un poids basé sur les données sur la main-d'oeuvre obtenues au cours du recensement de 1961 afin de refléter l'importance relative de chaque industrie. Les nombres-indices des branches d'industries tel que mines, fabrication, etc., s'obtiennent en assignant un poids aux indices de chaque groupe majeur d'industrie, lesquels poids reflètent l'importance relative de la main-d'oeuvre dans chaque groupe majeur tel que déterminé au cours du recensement de 1961.

Note Historique

Depuis sa fondation en 1900, le ministère du Travail du Canada a compilé des statistiques des taux de salaire et des heures de travail qu'il a publié de temps à autre dans la *Gazette du Travail*.

Premiers rapports

Le premier rapport distinct sur les taux de salaires a été publié en 1921, comme supplément à la Gazette du Travail. C'était le premier rapport de la présente série et il contenait des données intéressant certains métiers de diverses industries dans plusieurs villes. Les chiffres étaient tirés surtout de rapports des employeurs et des syndicats ouvriers, mais on utilisait aussi, des données puisées dans les conventions collectives et des renseignements fournis par les représentants extérieurs du ministère et les correspondants de la Gazette du Travail. Dans les rapports subséquents, le cadre de la statistique a été étendu graduellement et de nouveaux groupes d'industries ont été ajoutés au cours des années, de sorte que le rapport fournit maintenant des renseignements sur des occupations choisies, pour les principales industries au Canada.

Rapports de 1956 à 1965

Au début de 1957, les résultats de l'enquête du ler octobre précédent ont été publiés pour la première fois sur feuilles mobiles. Grâce à ce nouveau service, les résultats de l'enquête sont publiés par intervalles, à mesure que les renseignements deviennent disponibles; ils sont réunis plus tard en un volume broché.

Le nombre des établissements visés par l'enquête passa en 1959 de 13,500 à 19,500 établissements. Le lecteur désirant mesurer les effets de cet élargissement du cadre de l'enquête peut consulter le rapport no. 43, Taux de Salaire, Traitements et Heures de Travail, Octobre, 1960; dans ce rapport, les nombres-indices de taux de salaire sont indiqués sur une base comparable à la série précédant l'expansion dans le cadre de l'enquête et, également sur une autre base incluant tous les établissements visés par l'enquête de 1959.

En 1960, le cadre de l'enquête sur les occupations de bureau, de l'entretien, des services et sur les manoeuvres a été élargi de manière à englober, outre la fabrication, les groupes industriels suivants: transports, communications et services d'utilité publique; commerce; finance et service pour les 52 localités pour lesquelles des renseignements étaient publiés.

En 1961, le cadre de l'enquête a été étendu aux gouvernements fédéral et provinciaux pour les employés des occupations de bureau, de l'entretien et des services et des manoeuvres dans les 52 localités considérées.

En 1964, l'enquête portant sur ces occupations a été étendue aux hôpitaux ayant 25 lits ou plus. L'information ainsi obtenue a été incluse avec les données d'autres industries dans les groupes "Autres que fabrication" et "Toutes les industries" pour les années 1964 et 1965. A partir de 1964, également, les renseignements obtenus d'établissements situés au Yukon et dans les territoires du Nord-Ouest ont été inclus, le cas échéant, dans le calcul des taux moyens de salaire pour l'Industrie dans les tableaux d'industrie.

Rapport 1966

L'enquête de 1966 a comporté trois changements majeurs:

- (1) La classification des industries a été changée de la classification-type des industries du Bureau fédéral de la statistique de 1948 à celle de 1960. (Des détails complets sur cette dernière classification-type apparaissent dans le Manuel de la classification-type des industries, publication no 12-501 B.F.S.).
- (2) L'allocation des unités faisant rapport, ou établissements, aux diverses classifications industrielles a été revisée.
- (3) Une nouvelle base de classification géographique a été introduite.

Ces trois changements ont exercé une influence sur les résultats de l'enquête pour certaines industries et certaines localités.

Les changements à la présentation des renseignements par industrie causés par l'introduction en 1966 de la classification-type des industries de 1960 sont résumés ci-dessous.

1 - industries disparues (rapport 1966)

- vêtements de soutien
- caisses et paniers en bois
- dérivés de l'argile

2 - nouvelles industries (choix proposé)

- vêtements d'enfants
- fonte et affinage
- chaudières et plaques
- produits métalliques de charpente, d'architecture et d'ornement
- fil métallique et ses produits
- transports aériens
- transports interurbains et ruraux par autobus
- radiodiffusion et télévision
- services téléphoniques
- hôpitaux

3 - industries ayant une nouvelle classification

DE (avant 1966)

- Complets et paletots pour hommes et garçonnets

- Chemises de toilette
- Vêtements de travail et de sport
- Manteaux et ensembles pour femmes et pour enfants
- Robes
- Meubles en bois
- Pièces de fonte
- Machines-outils

À (1966)

- vêtements d'hommes
- vêtements d'hommes
- vêtements d'hommes
- vêtements de femmes
- vêtements de femmes
- meubles de maison, de bureau et autres
- fonderie de fer
- manufacturiers de machines et matériel divers

3 — Industries ayant une nouvelle classification (fin)

DE (avant 1966)

- Machinerie industrielle
- Fer et acier primaires
- Produits de la tôle
- Produits du laiton et du cuivre
- Machinerie et équipement électriques lourds
- Radio, télévision et autre appareillage électronique
- Radio, télévision et autre appareillage électronique
- Réfrigérateurs, aspirateurs et divers appareils électriques
- Réfrigérateurs, aspirateurs et divers appareils électriques
- Acides, alcalis et sels
- Transport par eau (fret et passagers)
- Transport par eau (bateaux citernes)

À (1966)

- manufacturiers de machines et matériel divers
- industrie du fer et de l'acier
- industrie de l'estampage, du matriçage et du revêtement des métaux
- industrie de l'estampage, du matriçage et du revêtement des métaux
- manufacturiers de matériel électrique industriel
- manufacturiers d'appareils électro-ménagers de radio et de télévision
- manufacturiers de matériel de télécommunication
- manufacturiers de petits appareils électriques
- manufacturiers de gros appareils (électriques ou non)
- produits chimiques indus-
- transports par eau
- transports par eau

Conséquemment à la nouvelle classification géographique, le nombre de localités pour lesquelles des renseignements sont publiés est passé de 52 à 58.

Avec le présent rapport débute la publication d'une nouvelle série de données pour l'industrie de la construction. Sauf pour le Québec, les renseignements relatifs aux taux de salaire et aux heures de travail sont tirés de conventions collectives de travail en vigueur au 1er octobre 1966. Les renseignements pour les localités du Québec sont tirés des décrets établis sous la loi des décrets de conventions collectives, administrée par les comités paritaires de l'industrie de la construction. Les renseignements ont été mis à la disposition du ministère du Travail du Canada par les ministères de travail et autres agences gouvernementales des diverses provinces.

SUMMARY OF GENERAL WAGE TRENDS

Trends in wage rates, as measured by the October 1 survey, are reflected in the index numbers for individual industries and for certain main industries shown in tables A and B of this report.

The General Index which applies to all industries moved from 116.5 to 124.0 for a 6.4 per cent rise between 1965 and 1966.

For the eight main industrial groups movement in the index numbers from 1965 to 1966 was as follows:

Industry Group	Index (196	Per cent change 1965 to 1966	
	1965	1966	%
Logging	126.4	140.2	+ 10.9
Mining	113.3	122.7	+ 8.3
Manufacturing	115.0	121.6	+ 5.7
Construction	119.8	129.8	+ 8.3
Transportation, Communication			
and Other Utilities	114.3	122.3	+ 7.0
Trade	116.9	123.9	+ 6.0
Service	118.4	125.5	+ 6.0
Local Administration	118.1	124.6	+ 5.5
General Index - All Industries	116.5	124.0	+ 6.4

Within the manufacturing sector, the index for wage rates in the durable goods industries rose by 5.9 per cent from 1965 to 1966, while the index number for the non-durable goods industries advanced by 5.5 per cent during the same period.

APERÇU DES TENDANCES GÉNÉRALES DES SALAIRES

Les tendances des taux de salaire, telles que mesurées par l'enquête du 1er octobre, sont décrites dans les indices pour les industries individuelles et pour certaines industries principales indiquées dans les tableaux A et B de ce rapport.

L'indice général qui s'applique à toutes les industries est passé de 116.5 à 124.0 pour une hausse de 6.4 p. 100 de 1965 à 1966.

Pour les huit principales divisions industrielles le mouvement dans les indices de 1965 à 1966 s'établit comme suit:

			Chang ement en
Division industrielle	Indi (1961 :		pourcentage 1965 à 1966
	1965	1966	%
Forestage	126.4	140.2	+ 10.9
Mines	113.3	122.7	+ 8.3
Industries Manufacturières	115.0	121.6	+ 5.7
Construction	119.8	129.8	+ 8.3
Transports, communication et			
autre services d'utilité publique	114.3	122.3	+ 7.0
Commerce	116.9	123.9	+ 6.0
Services	118.4	125.5	+ 6.0
Administration locale	118.1	124.6	+ 5.5
Indice général des industries	116.5	124.0	+ 6.4

Dans le secteur de la fabrication, l'indice des taux de salaire pour les industries des marchandises durables est monté de 5.9 p. 100 de 1965 à 1966 tandis que l'indice pour l'industrie des marchandises non durables a avancé par 5.5 durant la même période.

Table A - INDEX NUMBERS OF AVERAGE WAGE RATES BY INDUSTRY, 1962 - 1966

LOCAL GOVERNMENT (Municipal Government Only)					124.6
GENERAL INDEX - ALL INDUSTRIES	103.1	107.0	110.9	116.5	124.0

^{&#}x27;Index numbers for the years 1962-65 have been recalculated for most of the industries included in this Report using the base year 1961=100, so as to form a continuous series to 1966 that incorporates all the changes made in the survey of wage rates in 1966; for certain industries (marked "-"), sufficient historical information to calculate an index series was not available.

²Durable Goods: include Wood, Furniture, Primary Metal, Metal Fabricating, Machinery (except electrical), Transportation Equipment, and Electrical Products Industries.

³Non-Durable Goods: include the remaining manufacturing industries.

Les indices pour les années 1962-1965 ont été calculés pour la plupart des industries comprises dans le présent rapport en utilisant l'année de base 1961-100, de façon à former jusqu'à 1966 une série continue dans laquelle il est tenu compte de toutes les modifications apportées à l'enquête sur les taux de salaire en 1966; pour certaines industries (portant l'indication "-"), on ne disposait pas de renseignements historiques suffisants pour pouvoir établir une série d'indices.

²Marchandises durables: comprennent industries du bois, du meuble, de la métallique primaire, des produits métalliques, de la machinerie (sauf le matériel électrique), du matériel de transport, et des appareils et du matériel électrique.

³Marchandises non-durables: comprennent les autres industries manufacturières.

'Gold Quartz Mines (Industry No. 0520) — Establishments primarily engaged in operating lode mines for gold. This industry also includes the dressing and beneficiating of the ore and the production of bullion at the site of the mine.

The figures for the occupations of Underground Workers (occupations 1 to 12, page 44) include the basic rates of workers on incentive bonus plans as well as rates for those on time work; the rates for the occupations of Surface and Mill Workers (occupations 13 to 24, page 44) apply to time work only.

Includes Felter Operator (Filterman), (winding-Mill Operator (Ball-Mill Operator; Rod-Mill Operator; Tubeman) and Solution Man.

This session applies only to unabout an incoming bound of the filter of the filter

This section applies only to workers on incentive bonus plans, that is, the figures shown represent the basic rates plus bonus earnings.

¹Mines de quartz aurifère (industrie no 0520) - Etablissements s'occupant surtout de l'exploitation de mines d'or filonien. Cette industrie comprend aussi le traitement du minerai et la production de lingots à la mine même.

³-Les chiffres pour les occupations des ouvriers du fond (occupations 1 à 12, page 44) comprennent les taux de base des travailleurs assujétis à des régimes de primes de rendement, de même que les taux des travailleurs rémunérés au temps; les taux pour les occupations des ouvriers d'usine et de surface (occupations 13 à 24, page 44) s'appliquent au travail au temps seulement.

Comprend préposé au filtre, conducteur de machine broyeuse (moulin à boulet; moulin tige; tube finisseur) et préposé à solution.

«Cette section ne s'applique qu'aux travailleurs assujétis à des régimes de primes de rendement, c'est-à-dire que les chiffres donnés représentent les taux de base accrus des primes,

From and Steel Mills (Industry No. 2910) — Four main types of establishments are classified in this industry: 1) establishments primarily engaged in manufacturing pig iron and ferroalloys, 2) steel works primarily engaged in manufacturing ingots, steel castings and in continuous casting of steel, 3) rolling mills primarily engaged in hot and cold rolling of steel into primary shapes, 1) coke ovens operated in connection with blast furnaces. In some cases the blast furnace, steel mill, rolling mill and coke oven, or some combination of two or more of them, are carried on as one integrated operation and the manufacturing processes may be carried on beyond the rolling mill stage.

Industrie du fer et de l'acier (industrie no 2910) — (Quatre catégories d'établissements sont classés à cette industrie; I) ceux qui s'occupent principalement de la fabrication de la fonte brute et l'es ferro-alliages; 2) les aciéfries qui fabriquent des lingois et des moutages et font le coulage en conti-nu de l'acier; 3) ceux qui font le laminage à chaud ou à froid de l'acier pour en faire des profilés primaires; I) les cokeries qui desservent les hauts fourneux. Dans certains cas, le haut fourneux, l'aciérie, la laminerie, et la rokerie sont associés (deux opérations ou plus) dans un même établissement intégré et la transformation peut s'y effectuer au-delà du laminage.

Stendard Hours - Hours on duty at sea: eight per day (3 watches of eight hours). In most cases only urgent or | Heures normales - Les heures deservice en mer sont de 8 par jour (3 quarts de 8 heures). D'habitude, seul vital work is done on Saturdays and Sundays.

Water Transport (Industry No. 5040) — Establishments primarily engaged in the operation of vessels for the transportation of freight and passengers whether overseas or on inland and intercoastal waterways. This industry also includes the operation of ferries across vives or in harbours; the operation of Inghters and other harbour vessels; marine towing and tugboat services; and oil tankers.

Board and lodging supplied in addition to rates shown. Rates vary to a great extent according to size and type

Rates for male and female combined where applicable,

le travail urgent ou vital est accompli le samedi et le dimanche.

'Transports par equ (industrie no 5040) - Établissements s'occupant surtout de l'exploitation de navires pour le transport surmer, fluvial ou côtier de passagers et de marchandises. Cette rubrique comprend aussi les transports de caractère local tels que l'exploitation de bacs sur une rivière ou dans un port, l'exploitation de gabares et autres vaisseaux portuaires, services de remorquage et bateaux-citernes.

Pension et logement sont fournis en sus des taux indiqués. Les taux varient sensiblement suivant la grosseur et le genre de navire.

Taux pour employés masculins et féminins combinés là où le cas s'applique,

¹To obtain minimum rates per day multiply rate per mile by 150 for passenger conductor, passenger brakeman, and baggageman; and by 100 for other trades shown on a mileage basis.

²Rates per mile vary with the weight on drivers as well as the number of diesel units operated. The weight on drivers for the ranges of rates shown varies from less than 140,000 pounds to 550,000 pounds, the number of units operated, from 1 to 4 units.

The range refers to minimum and maximum rates actually being

*Machinist, boilermaker, blacksmith, plumber, sheet metal worker, cabinet maker, carpenter (coach, locomotive and bench), welder, etc. *Freight car carpenter, freight car painter, car inspector, car

repairer, etc.

¹Pour obtenir le taux quotidien minimum des conducteurs de trains de voyageurs, serre-freins de trains de voyageurs, et préposés à bagages, multipliez le taux du mille par 150; et par 100 pour les autres catégories de personnel roulant rémunérées au mille.

²Les taux au mille varient selon le poids sur les roues motrices aussi bien que le nombre d'unités-diesels manoeuvrées. Le poids sur les roues motrices pour les marges de taux indiquées varie de moins que 140,000 livres à 550,000 livres, le nombre d'unités-diesels manoeuvrées, de là 4 unités.

"Machiniste, chaudronnier, forgeron, plombier, ouvrier tôlier, ébéniste, charpentier (wagon, locomotive et établi), soudeur, etc.

Charpentier en wagons de marchandises, peintre de wagons de marchandises, inspecteur de wagons, prépareur de wagons, etc.

Table 83 - RETAIL TRADE, OTHER' - Tableau 83 - AUTRES COMMERCES DE DÉTAIL'

Retail merchandizing other than food and motor vehicles) — Concluded — (Commerce de détail autre que l'alimentation et véhicules automobiles) — Fin sements de Retail Trade, Other (Industry Nos. 6420-6990, except 6560 and 6580) - Establishments included in retail trade are those primarily engaged in buying commodities for resale to the general public for personal or household consumption; all such establishments are included here except retail food stores and establishments engaged in the sale and/or repair of motor vehicles.

Salary rates for salespersons, both male and female, were reported according to the following definitions:

Salesperson - Class A

Requires little knowledge regarding the merchandise sold. Often works behind a counter, selling one or a variety of inexpensive commodities such as notions, candy, drug sundries, tobacco products, magazines, greeting cards, etc.

Salesperson - Class B

Requires enough knowledge of products to assist customers in making a selection, May sell various types of merchandise or specialize in a particular type of commodity such as wearing apparel, bedding, small electrical appliances, china, costume jewellery, general hardware, etc.

Salesperson - Class C

Requires detailed knowledge of products and considerable skill in salesmanship, Is often on salary and commission, or straight commission and may be required to follow-up prospective sales by calling on customer at his home. Products sold tend to be higher priced, such as furniture, refrigerators, television sets, power tools, air conditioners, jewellery,

Autres commerces de détail (industries nos 6420-6990, sauf 6560 et 6580) — Les établissements inclus au commerce de détail s'occupent surtout de l'achat des marchandises pour revente au grand public pour consommation personnelle ou ménagère; tous les établisce genre sont inclus à cette rubrique, sauf les magasins d'alimentation, et les établissements s'occupant de la vente et ou de la réparation de véhicules automobiles. 2 Les taux de salaire pour vendeurs et vendeuses ont été rapportés selon les descriptions de classe suivantes;

Vendeur(se) - Classe A

Ne possède qu'une faible connaissance de la marchandise vendue. Travaille souvent au comptoir à la vente d'un seul ou de divers produits, tels que menus objets, bonbons, produits pharmaceutiques, produits du tabac, magazines, cartes de voeux, etc.

Vendeur(se) - Classe B

Doit connaître suffisamment les produits pour aider la clientèle à faire son choix. Peut vendre divers produits ou se spécialiser dans la vente d'un type particulier de marchantels que vêtements, literie, petits appareils électriques, vaisselle, bijouterie de fantaisie, quincaillerie, etc. dises,

Vendeur(se) - Classe C

Doit connaître à fond les produits et être très habile dans la vente. Travaille souvent à salaire et à commission ou directement à commission, et peut avoir à donner des démonstrations pratiques du produit à l'extérieur. Les produits vendus sont ordinairement de prix plus élevé, tels qu'ameublements, réfrigérateurs, appareils de télévision, outils nécaniques, climatiseurs, bijouteries, etc.

NOTE - TABLES 92 TO 153

The wage and salary data published on a community basis are derived from survey returns from establishments normally having 20 or more employees in the community. There are 58 community tables which are published in the following order: Montréal, Toronto, Winnipeg and Vancouver; the remaining 54 localities appear in alphabetical order within each province, the provinces being arranged from east to west.

The major industry groups that make up each of the industrial divisions used in the community tables are as follows:

- All Industries Includes all industries covered in the Manufacturing and Non-Manufacturing industry divisions described below.
- 2. Manufacturing Includes the Manufacturing industries listed (Tables 7 to 67) in the Table of Contents in addition to the industry groups Non-Metallic Mineral Products and Miscellaneous Manufacturing.
- 3. Non-Manufacturing Includes Non-Manufacturing industry groups listed below in addition to Logging and Mining.
- 4. Transportation, etc. Includes the following major groups of industries: Transportation (and incidental services); Storage; Communication (radio and television, telephone, telegraph and cable); Electric Power, Gas and Water Utilities.
- 5. Trade Includes Wholesale and Retail Trade.
- 6. Finance Includes Financial Institutions; Insurance and Real Estate industries.
- 7. Public Administration Includes Federal, Provincial and Municipal governments but not foreign government services in Canada.
- 8. Service The most important major groups of industries included are Recreational Services; Services to Business Management (accountancy, advertising, engineering, etc.); Personal Services and Miscellaneous Services. In addition, Hospitals are included from the Health and Welfare Services group.

Where no information is published for an occupation or for a whole industrial group in a community, insufficient data is available to meet the criteria for publishing an average or range of wage rates for an occupation (see Technical Notes, page 4, for description of the publication criteria applied to the results of the survey).

A copy of the occupational definitions used in the 1966 survey for the occupations listed in these tables is available on request from the Economics and Research Branch, Canada Department of Labour, Ottawa, Ontario.

NOTE - TABLEAUX 92 À 153

Les données sur les taux de salaire et traitements publiées sur une base de localité proviennent des questionnaires du relevé des établissements ayant 20 employés ou plus dans la localité. Il se trouve 58 tableaux de localités qui sont publiés dans l'ordre suivant: Montréal, Toronto, Winnipeg et Vancouver; les autres 54 localités apparaissent en ordre alphabétique à l'intérieur de chaque province, les provinces étant classifiées de l'est à l'ouest.

La composition industrielle des groupes est la suivante:

- 1. Toutes les industries comprend toutes les industries se trouvant dans le cadre des groupes Fabrication et Autres que Fabrication tels que décrits ci-dessous.
- 2. Fabrication comprend les industries manufacturières énumérées (tableaux 7 à 67) à la partie 3 de la table des matières en plus des deux groupes industriels, produits minéraux non métalliques et industries manufacturières diverses.
- 3. Autres que fabrication comprend les industries autres que fabrications décrites ci-dessous en plus des exploitations forestières et des exploitations minières.
- 4. Transports, etc. comprend les groupes industriels suivants: transports et services auxiliaires: entreposage; communication (radiodiffusion et télévision, services téléphoniques, services télégraphiques et de câbles); électricité, gaz et eau.
- 5. Commerce comprend le commerce de gros et le commerce de détail
- 6. Finance comprend les entreprises financières et les secteurs de l'assurance et de l'immeuble.
- 7. Administration publique comprend les gouvernements fédéral, provinciaux et municipaux. N'inclut pas les services de gouvernements étrangers au Canada.
- 8. Service il s'agit surtout ici des services récréatifs, services extérieurs des entreprises (comptabilité, publicité, services techniques etc.), services personnels et services divers en plus des hôpitaux du groupe santé et d'oeuvres sociales.

Lorsque aucun renseignement n'est publié à l'égard d'une occupation ou de l'ensemble d'un groupe industriel dans une ville ou une collectivité, c'est que nous ne disposons pas suffisamment de données pour satisfaire aux conditions de publication d'une moyenne ou d'une marge de taux de salaire pour telle occupation (on trouvera à la page 5 des notes techniques un exposé des conditions de publication qui s'appliquent aux résultats de l'enquête).

Une copie des descriptions d'occupations utilisées au cours du relevé de 1966 pour les occupations qui apparaissent dans ces tableaux peut être obtenue sur demande à la Direction de l'économique et des recherches, ministère du Travail du Canada, Ottawa, Ontario.
